RISK PROFILE

Low | Low - Medium

- This portfolio has low or no equity exposure, resulting in far less volatility than more aggressive mandated portfolios and in turn the probability of a long-term capital loss is much less likely. However, expected potential long term investment returns could be lower over the medium to long term.
- Where the asset allocation contained in this MDD reflect offshore exposure, the portfolio is exposed to currency risks.
- The portfolio is exposed to default and interest rate risks.
- Therefore, it is suitable for short to medium term investment horizons.

Medium | Medium - High

- This portfolio holds more equity exposure than a low risk portfolio but less than a high-risk portfolio. In turn the expected volatility is higher than a low risk portfolio, but less than a high-risk portfolio. The probability of losses is higher than that of a low risk portfolio, but less than a high-risk portfolio and the expected potential long term investment returns could therefore be lower than a high-risk portfolio due to lower equity exposure, but higher than a low risk portfolio.
- Where the asset allocation contained in this MDD reflects offshore exposure, the portfolio is exposed to currency risks.
- The portfolio is exposed to equity as well as default and interest rate risks.
- Therefore, it is suitable for medium term investment horizons.

High

- This portfolio holds more equity exposure than any other risk profiled portfolio and therefore tend to carry higher volatility due to high exposure to equity markets.
- Expected potential long term returns could be higher than other risk profiles and in turn the risk of potential capital losses is higher.
- Where the asset allocation contained in this MDD reflect offshore exposure, the portfolio is exposed to currency risks.
- Therefore, it is suitable for long term investment horizons.

OPULENCE CAUTIOUS PORTFOLIO

WRAP PORTFOLIO INFORMATION DOCUMENT | 31 JULY 2019

MARKET COMMENTARY

*South African index returns are quoted in rands, while all other return figures are quoted in USD terms.

After an exceptionally strong start to the year, financial markets paused for breath in July, with global markets delivering a mute return of 0.52% (MSCI World USD) and the USA dragging the index higher. The S&P 500 reached new all-time highs during July, closing 1.4% boosted by a positive start to the second quarter earnings season. Also, the decision by the Fed to cut interest rates by 25 basis points, for the first time since the 2008 Global Financial crisis provided more support. However, the Fed Chair Jerome Powell disappointed investors as he said the cut is "not the beginning of a long series of rate cuts", as they were expecting more cuts. In commodities, precious metals posted a solid gain, amid a 6.2% rally in gold spot prices despite the strengthening of the dollar. In the Eurozone, despite the European Central Bank indicating plans to stimulate the economy given the weak growth and also the appointment of Christine Lagarde as the new central bank president, European equities still declined by -1.92% (MSCI Europe USD). Primarily driven by the appointment of Boris Johnson as the new UK prime minister, raising the possibility of the UK leaving the European Union without a deal, these chains of events weaken the value of the pound. The drop-in pound was a boost to companies with overseas earnings. The Japanese shares made modest gains, with trade-wars continuing to be a headwind. The prime Minister Abe's party won the Upper House elections which effectively removed any uncertainty over the rise in the consumption tax, scheduled for October. Emerging market equities declined by -1.14%, as risk appetite contracted in response to mounting geopolitical tensions between USA-China and strengthening of the dollar compounded matters worse. By contrast, Turkey registered a robust return as the central bank cut interest rates by 425bps to 19.75%, more than an expected 250bps cut. Brazil posted a positive return of 3.05% (BOVESPA IBRX) amid progress in pension reform progress. From a domestic perspective, South Africa stocks were buffeted by a deteriorating fiscal outlook, with the FTSE/JSE All Share Index declining by 2.4%. The mounting costs of SOE rescue packages became evident, with the finance minister announcing an R59 billion Eskom bailout package. Subsequently, one of the rating agencies Fitch downgraded S.A sovereign rating to negative, these developments combined with global geopolitical risk weakened the rand by 1.74%. Furthermore, the All Bond Index retracted by 0.74%, as the 10-year bond yields rise from about 8% to 8.4% as SOE investor concerns intensified.

DISCLAIMER

Managed by: Opulence Asset Management. Authorised Financial Service Provider, FSP Number 48738.

The fund allocation (above) indicates the holdings of the model portfolio, also referred to as wrap portfolios. The portfolio holdings are quantitatively and qualitatively assessed on a quarterly basis by the independent investment committee. Where any of the above funds are not available on any particular Linked Investment Service Provider (LISP) platform, an appropriately comparable replacement fund is selected by the investment committee. Due to the possible fund composition variations resulting from such comparable replacements, the actual overall asset allocation, fees and returns may differ across platforms. Periodic portfolio rebalancing is initiated by the investment committee to realign strategic allocations whilst taking specific account of the intended risk and return profiles of the portfolios as well as capital gains tax and cost effects. Past performance is not indicative of future performance and for the historical return purposes above it was assumed that before the launch date of the portfolio, the portfolio's holdings and asset allocation remained static during the entire back tested period. The capital or the return of a portfolio is not guaranteed. A wrap fund is a portfolio consisting of a number of underlying investments wrapped into a single product. Wrap funds are not legal CIS funds of funds as the wrap fund itself is not a collective investment portfolio, but is simply a collection of separate collective investment portfolios and money market accounts. With a wrap fund the investor has direct ownership of the underlying investments. Wrap funds are not regulated by the Collective Investment Schemes Control Act and do not have a separate legal status. They are regulated by the same legislation that applies to Linked Investment Services Providers (LISPs), namely the Stock Exchanges Control Act and the Financial Markets Control Act. Investors should take note that any changes made within a wrap fund can trigger capital gains tax.

The portfolio's performance numbers are based on a master portfolio tracked in the Morningstar Direct system. These performance numbers are net of all underlying managers TER's, but gross of the portfolio management, LISP and advice fees.

FAIS CONFLICT OF INTEREST DISCLOSURE

Please note that your financial advisor has to disclose any conflict of interest as well as all fees received relating to your investment in writing to you.
